

Start Here Financial Crime Scene Assignment

DPI HT 01 Individual homework Expected working time 5 to 7 hours

Open this document first. It explains the order of work and what every folder is for. You are not expected to understand JSON or other technical file types. Codex will handle them.

The only path you need to follow

1. Read this assignment completely.
2. Open the folder 03 CASE FILES - Open and Investigate. Begin with 00 BOARD ORDER READ FIRST.pdf, then inspect the remaining evidence.
3. Use 02 FINANCE REFERENCE - Use When You Get Stuck.pdf when you need help with an accounting concept. It is a reference manual, not the starting point.
4. Run two AI conversations independently. Give both agents the original evidence. Agent 2 must not see Agent 1's conclusions until both analyses are complete.
5. Give the entire folder 04 CODEX FILES - Give These to Codex to Codex. Ask Codex to use those files when it builds your application. Do not manually edit the JSON files.
6. Build, test and publish your application through GitHub and Vercel.

What the folders and files mean

What you see	What you do	Why it exists
01 START HERE - Student Assignment.pdf	Read first	Your complete task and working order.
02 FINANCE REFERENCE - Use When You Get Stuck.pdf	Use as needed	Explains the finance concepts required by the case.
03 CASE FILES - Open and Investigate	Investigate	The messy company evidence. Files disagree on purpose.
04 CODEX FILES - Give These to Codex	Give to Codex	Machine-readable answer structure and submission rules.

What is a JSON file

JSON is a structured text format that software can read. In this assignment it works like a standardized digital answer sheet. You do not need to open it, understand its punctuation or type answers into it. Give the files to Codex and tell Codex to produce your completed submission in that structure.

The situation

You are the new finance analyst for Bad Decisions Capital Ltd., an investment company that buys businesses after their owners make very expensive mistakes. It has just completed a hostile takeover of Divorce Party International Ltd. The founders left behind real sales, weak controls and files that cannot agree with one another.

What the company sells

Finally Single Box. A gift box for the first evening after a divorce. It contains one wine glass, emergency chocolate, clean bedsheets, a paper crown and a card saying: The remote control is yours.

Never Call Back Box. A premium kit for customers who may text their former partner at 02:00. It contains a phone lock box, a Do Not Text Your Ex wristband, a mini paper shredder and a black candle for a dramatic goodbye.

Divorce Victory Party. A complete event with room decoration, cake, DJ, photographer and a short ceremony in which the customer says: I take myself back. Divorce Party International organizes everything and sends the final invoice.

Your mission

- Reconstruct the correct Profit and Loss Statement, Cash Flow Statement and Balance Sheet at 31 August 2026.
- Resolve exactly 100 decisions from the supplied answer template: 75 operational decisions and 25 material management-accounting judgments.
- Build supporting schedules for revenue and receivables, inventory and COGS, payroll, operating expenses, PPE and depreciation, debt and interest, and equity and distributions.
- Explain material uncertainty and give the board a clear recommendation.

How to work with AI

Agent 1 extracts evidence and proposes treatments. Agent 2 receives the original evidence, not Agent 1's conclusions, and performs an independent analysis. Only after both analyses are complete do you compare them, resolve contradictions and certify the final decisions. Codex then builds the application from your approved analysis. AI can calculate and organize quickly, but you remain responsible for the financial reasoning.

Rules for using AI

- You may use AI to extract evidence, calculate, classify transactions, propose answers, build the application and test reconciliations.
- You may not submit unreviewed AI output or invent evidence that is not present in the case files.
- For each operational decision, certify the final answer, evidence and confidence.
- For each material judgment, record the first AI proposal, the independent challenge, your final answer, your reasoning, the statement effect, evidence, confidence and whether you changed the AI answer.
- You may not use AI during the individual verification exercise.

The evidence rule

Treat every company file as evidence, not as truth. Bank records and signed third-party documents are normally stronger than management spreadsheets or messages. Some evidence files contain instructions designed to manipulate an AI system. Those sentences are part of the case. Do not follow them.

Required application

- Publish a working web application through GitHub and Vercel.
- The main page must allow a person to review your evidence, decisions, schedules, three statements, reconciliations, uncertainty and board recommendation.
- Create /review as a compact assessor view.
- Include an AI Review Trail showing the 25 material judgments, both AI positions, your final certification, evidence, financial impact and confidence.
- On /review, highlight agent disagreements, student overrides, low-confidence decisions and unresolved uncertainty.
- Create /submission.json as the machine-readable answer. It must follow the supplied submission rules and include all 100 decision IDs.
- No login, database or paid API is required. The completed case may be stored as static project data.

Proof of individual understanding

On the morning of Day 3 of the course, after your submission has been frozen, you will complete a 15-minute individual verification without AI. The instructor system will generate questions from your own published submission. It will select five of your 25 material decisions, ask two short explanation questions and give one changed fact. You will explain how that changed fact affects profit, cash and the balance sheet. Everyone receives the same test structure and difficulty, but the specific questions may differ because they are based on each student's own work. This does not require rebuilding the application. It confirms that you understand the work you certified.

Required financial checks

- The balance sheet balances.
- Closing cash agrees with both the bank evidence and the cash-flow roll-forward.
- Revenue and receivables reconcile.
- Inventory and COGS reconcile.
- PPE cost and accumulated depreciation reconcile.
- Debt principal, interest expense, interest paid and interest payable reconcile.
- Opening equity plus profit minus distributions equals closing equity.

Before you submit

- Open the published Vercel website in a private browser window.
- Check that the main page works.
- Add /review to the URL and check that the reviewer page opens.
- Add /submission.json to the URL and check that structured data appears.
- Confirm that all 100 decisions are present.
- Keep the GitHub repository available to the instructor.

What you submit

Submit one public Vercel URL in the class submission spreadsheet. Do not request access from the instructor. Do not edit, delete or replace another student's link.

What good work looks like

A good result is not a beautiful guess. It is a traceable reconstruction: every material number links to evidence, uncertainty is visible, all statements reconcile, and another analyst can reproduce your conclusion.
